PROFESSIONAL SUMMARY

Senior Unity developer and technical lead with 7+ years shipping interactive 3D and VR software. Started as a developer at PraxiLabs and grew into leading the Unity team — scaling it from 4 to 11 engineers across two squads while personally driving the platform's biggest technical shift: re-architecting the core engine from XML to a node-based (xNode) system that unlocked new features and the first mobile/tablet/smart-board build. Comfortable both hands-on in the codebase and running teams, roadmaps, and delivery on a product used by 2.5M+ learners in 160+ countries.

EXPERIENCE

PraxiLabs *Interactive 3D Virtual Science Labs — 2.5M+ users across 160+ countries, 11 global awards*

Unity Technical Lead

Apr 2021 – Present

- Promoted to lead the Unity team on technical merit after the previous lead departed, having become the deepest expert on the product's codebase.
- Re-architected the core experiment engine from XML to a node-based (xNode) system — a foundational change that unlocked faster feature development and cross-platform builds.
- Delivered the first mobile, tablet, and smart-board version of the platform, expanding reach beyond desktop.
- Grew the team from 4 to 11 engineers, structured into two Unity squads, and at peak headed both squads — one maintaining the legacy product, one building the rebuild — each with its own team lead reporting to me.
- Ran a full product rebuild across two parallel teams, balancing delivery on the live product with a ground-up new build.
- Contributed to growing the simulation library from 64 to 210+ experiments across 20+ science branches, on a platform serving 2.5M+ users in 160+ countries.
- Own sprint planning, roadmaps, task assignment, and mentoring; now lead the primary product team alongside a dedicated test-automation team.

Unity Developer → Vice Team Lead

Apr 2019 – Apr 2021

- Joined as a Unity developer building and extending virtual science experiments; rapidly became the reference expert on the product's architecture.
- Delivered new experiments and features, and drove the early move toward a more modular, maintainable experiment system.

Solutions For Information Technology *Game Developer — Sep 2018 – Apr 2019*

- Designed and developed 2D mobile games, owning all aspects of development except art.
- Contributed to game design and the creative process to deliver engaging, polished gameplay.

SKILLS

Core: Unity, C#, Virtual Reality (VR), node-based architecture (xNode), cross-platform builds, Agile / Scrum

Leadership: Team leadership & mentoring, sprint planning & roadmaps, cross-functional collaboration, code review, technical hiring input

Technical: C#, C++, Java, Python, JavaScript, HTML5, Three.js, Phaser, Unreal Engine, Blender, OpenGL, Android

Certifications: PMP — Project Management Professional (in progress)

Languages: Arabic (native), English (fluent — spoken & written)

SELECTED PROJECTS

- **Ice Rush** — Multiplayer VR racing game (PC VR, Unity).
- **Plan A** — Interior-design mobile app for room layout and furniture fitting (Unity).
- **Sky Strider** — Mobile platformer demo (Unity).

EDUCATION

Professional Diploma, Game Track — Information Technology Institute (ITI) *MCIT · Oct 2017 – Jun 2018*

- Graduation project: Ice Rush — a VR multiplayer racing game.

B.Sc. in Information Technology — Menofia University, Faculty of Computer & Information 2013 – 2017

- Graduation project: Herafeen — a freelance marketplace connecting customers with skilled craftspeople.
